Table

Guidance of Blade

Guidance of parts

The push guide can be used to cut parts flat perpendicular to saw.

Or to cut a specific angle using the adjustment screw.

It's a good way to keep your finger clear of the blade.

Guidance of Blade

It is important that you always keep your fingers outside this indicated triangle.

If needed use a piece of scrap to push your part.

Blade Guard

The blade guard can be adjusted on the right.

Always have the guard set to a height of 5-10 mm above your workpiece.

This will increase safety and quality of your work.

How to cut at an angle

By adjusting the angle of the table cuts at an angle can be made.

- *Caution! Be careful the push guide is not getting in the way of cutting.*
- *Set the table back to 0° tilt after use.*

Safety

- *Safety goggles*
- *No baggy clothing*
- *No open hair*
- *No jewelry*
- *Including watches and rings*
- *No gloves*
