# Terms

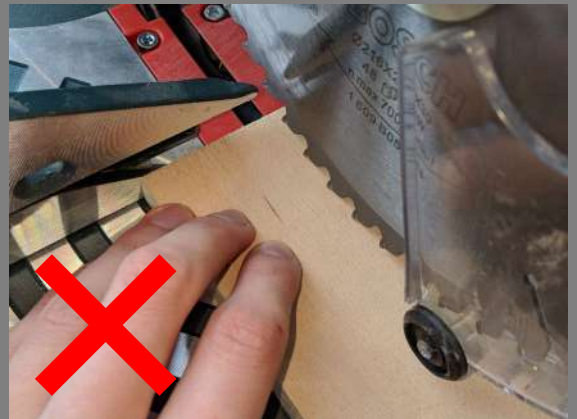

# Workpiece Holding

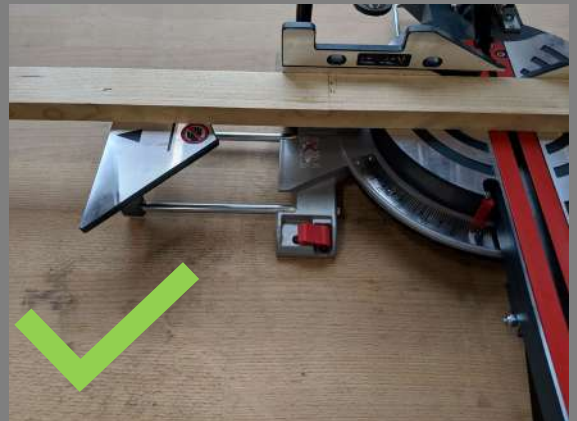

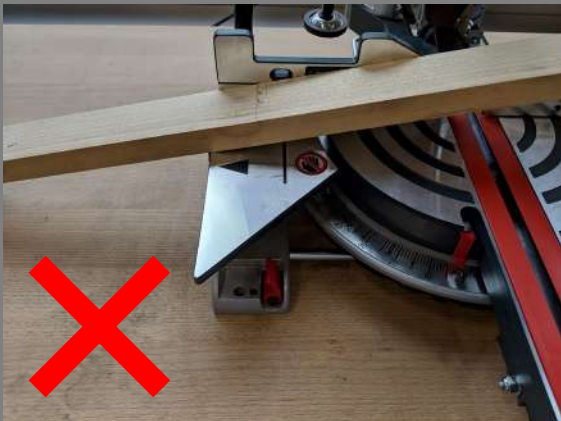

*Always use the material clamp to fix the workpiece before cutting!*

*NEVER hold the workpiece with your hand close to the saw blade!*

*For longer workpieces, use the table extensions*

# Alignment

*Use the laser to see where the workpiece will be cut.*

*Laser Switch*

*The laser ray shows you the left side of the final cut*

# Cutting

## Short cuts

*Grab the handle with one hand*

*Press the On/Off-switch and the lock-switch*

*Push the handle down slowly*

## Long cuts

*Loosen the slider lock – you can now move the slider*

*Start cutting at the front and push the handle towards the end of the machine until your cut is completed*

# Miter Angle

*Open the miter angle lock*

*Press the miter detent lever*

*Rotate the table*

*Miter Detent Lever*

*Miter Angle  
Lock*

*Use the miter angle  
indicator to set the required  
angle*

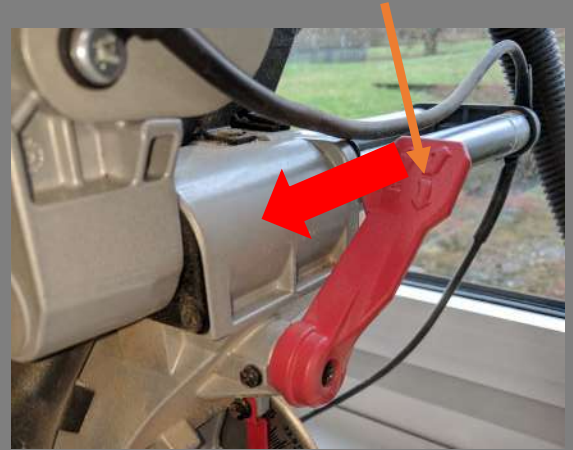

*Close the miter angle lock*

# Bevel Angle

Bevel Clamping Lever

*Open the bevel clamping lever*

*Adjust the bevel angle using the bevel angle scale*

*Close the bevel clamping lever*

**IMPORTANT:** *Move the adjustable fence to the left*
